

The skeletal system

By tian tian sun

What is the skeletal system

- * The skeletal system is bones that let you move ,they are different but all white out side.
- * The bone has three layers.the top one is the compact bone, the second one is the spongy bone, third one is a liquid called marrow

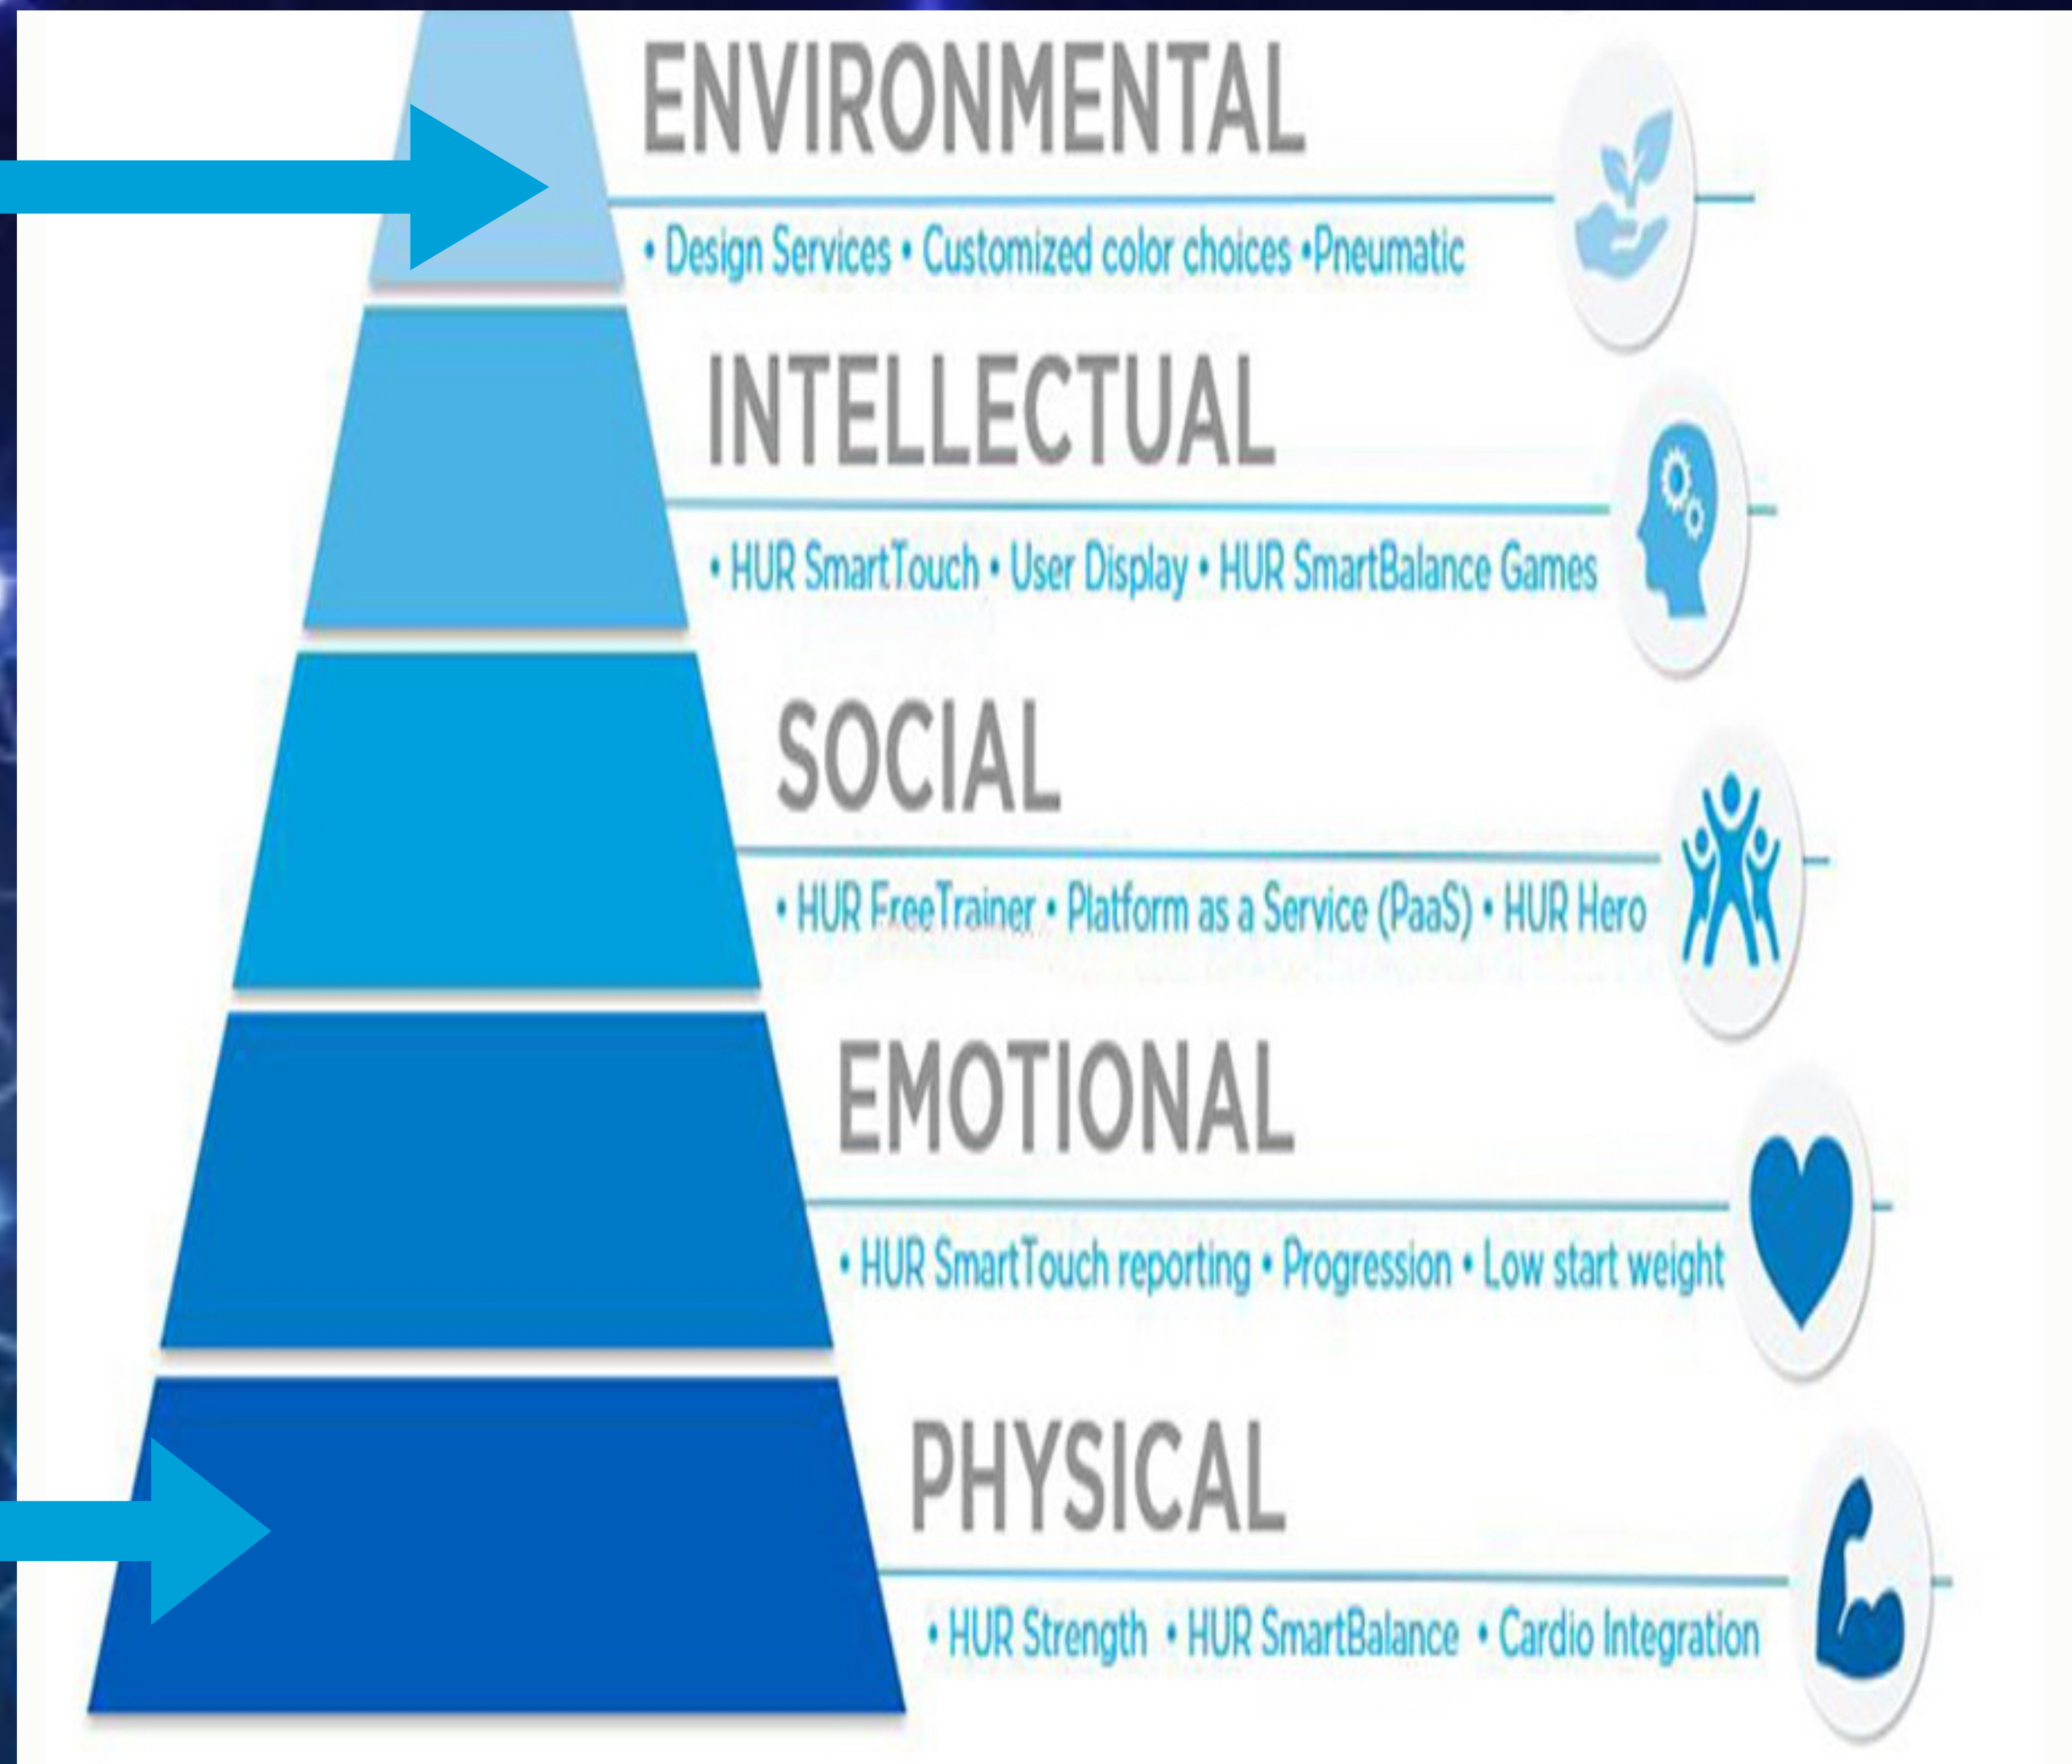

What is the other system connected to the skeletal system

- * The muscular system because bones and muscles are connected together
- * The circulatory system because bones make blood!

Environmental
because the things
we eat can make
our bones good or
bad

Physical because
the more you
exercise, the bone
will get stronger

Diseases

Viruses
-let you
have a
coronavirus

Parasite
-take out
medicine and
cause diarrhea

Bacteria
-strep throat or
pneumonia
