

Skeletal system

By Kevin

What is skeletal system

- When you walk,run ,or dance your skeletal system is helping you move. The bones in your skeletal system also give your body its shape and protect many of your organ.

How do skeletal system work

- Skeletal system that provides support and protection for the body's many internal organs.

Part of important skeletal system

- The skull and vertebrae the skull protect your brain not to be hurt.

How do the organs work together inside this system

- The connection between bones and bones is joint, the muscle is mainly used to provide energy.

How do it connect to other system

- Our muscular system helps hold the bones together and helps them to move.
